Type number SIO20150 Protector Shoe & Bag 100ml

Fabric and Leather

This Leather and Fabric Protector is a high-tech Nano layer, it forms a water and oil repellent flexible and durable barrier for shoe and bags made of fabric and original leathers.

A standard leather shoe car will need circa 10ml, a boots or bag will need more depending on their size and the surface, leather needs less and fabric needs more.

Advantages of Shoe and Bag protection

The Nano layer keeps the surface protected as it push away dirt and water.

The dirt has less change to penetrate into your shoes or bags fabric wires or leather.

Dirt is more easy to remove and more easy to clean.

The Nano layer is a flexible, breathable and invisible

Technical info

This Nano layer is a high-tech layer to form a water and oil repellent durable barrier on the surface of textiles and original leathers. In this product we managed to develop an ultra strong grip on the surface treated, and we optimised the durability for long lasting protection. Fabric & Leather protector is using a solvent-based type of sol-gel system. organic compounds and inorganic nano-scale compounds form a fully breathable, invisible layer what is chemically bonding on the surface treated.

Its important that shoe and bags are in new or almost new condition, and that they are free from any contamination and dirt. as the Nano layer only can attach to clean surfaces.

Spray the surface till it is saturated, and let it dry for at least 24 hours. The layer need this time to build up his strength.
