Trucks & Buses
What is NANO-CERAMIC?

NANO-CERAMIC is a revolutionary, ultra-durable, ceramic clear-coating that provides superior scratch resistance, and semi-permanent protection for all truck and bus finishes, paints, and exterior surfaces.

What makes NANO-CERAMIC so different?

NANO-CERAMIC is more than 4 times stronger than factory paint finishes and can absorb damage that would otherwise affect the appearance and integrity of your paint. This extremely durable ceramic coating reduces swirl marks and light scratches while protecting and preserving factory paint.

NANO-CERAMIC is completely resistant to acidic environmental substances like bird droppings, bug residue, acid rain, and tree sap, unlike your vehicle’s factory paint, which can be permanently etched and damaged by these substances. NANO-CERAMIC provides advanced protective barriers to your vehicle’s surfaces, maintaining both high-gloss and matte finishes.
What are the benefits of applying NANO-CERAMIC?

NANO-CERAMIC provides vehicles with a superior, near-permanent, clear coating that is resistant to chemical etching, harder than factory paint finishes, and able to greatly reduce swirl marks and fine scratches while leaving a superior, hydrophobic surface that is easier to clean and stays cleaner longer.

All vehicle materials can be treated with one of our NANO-CERAMIC coatings. Restore the color and shine to plastic trim with advanced hydrophobic and UV protection. Even chrome, aluminum, and other metals can have added protection, as our coatings can withstand temperatures of over 850°C/1500° F.

Step 1 The surface layer of factory clear coat is damaged and contaminated.

Step 2 Decontamination and polishing the clear coat to produce a smooth and even surface.

Step 3 Restoration of coating thickness. with a super-durable layer of NANO-CERAMIC
NANO-CERAMIC is available in different grades:

**SI10**  
*Basecoat*

- For maximum results with total hardness, first use our Basecoat 2.5 Micron.
- Especially recommended for soft clear coats and repainted vehicles.
- SIBC basecoat provides ultimate H9+++ hardness with an almost unremovable smooth finish ready to bond with any of our revolutionary protective coatings.
- UV & Thermal Resistance

**SI14**  
*Diamon Gloss*

- 2 Micron HD (High Density)
- Reduce micro-scratches with H9++ Hardness
- Superb Hydrophobic Effect
- Excellent Weather Resistance
- UV & Thermal Resistance
- Up to 5 Years of protection on factory paint & a 2-Year Limited Warranty.
- 5-Year Limited Warranty if you follow our maintenance program (in combination with SIBC)

**SI07**  
*Ultra Gloss*

- 6 Micron
- Reduce Scratches with H9+ Hardness
- Superb Hydrophobic Effect
- Excellent Weather Resistance
- UV & Thermal Resistance
- Enhanced Durability
- Up to 3 Years of protection on factory paint & a 1-Year Limited Warranty.
- 3-Year Limited Warranty if you follow our maintenance program (in combination with SIBC)

**SI06**  
*Clear View*

- Seal the pores of glass, acrylic surfaces & mirrors
- Repels water for 30% better visibility in rainy conditions
- 2H Hardness (2 Micron)
- Hydrophobic: Water & Dirt repellent
- Lasts 6-12 months

Diamond
Leather & Fabric Protection
Our coatings are anti-corrosive, anti-icing and have self-cleaning capabilities that effectively repel water and dirt, making the surface much easier to clean.

How to use SIO6, SI07, SI10, and SI14, on Paint, Fiberglass, Stainless Steel and Chrome:

These products can be stored for up to 24 months (in a dry, temperature-stable, dark environment)

Consumption:
Approximately 2 ml/m²
Ambient temperature: 5-30°C
Avoid direct sunlight and/or high humidity.

IMPORTANT:
Before you use a NANO-CERAMIC product, please make sure you wear suitable protection gear. We always recommend to use latex or nitrile gloves to make sure your hands are protected.

RECOMMENDATION
The best effect can be achieved by treating surfaces that are in new or almost new condition.

CLEANING
Clean the surface thoroughly until it is absolutely clean. If necessary, use our Shampoo and Scrub Cleaner with our Steril Pretreatment Cleaner as a last step to make sure that all Scrub Cleaner residue or other contamination is removed, and the coating can bind properly. Make sure that the surface is completely dry before application!

APPLICATION SI10 BASECOAT PERMANENT
Shake bottle before use! We recommend applying the treatment in easy-to-handle segments of about 50 x 50 cm. Put 5-6 drops of SI10 on the mini towel (#40100502, 15 x 15 cm) using an applicator block (#40100602) underneath. (Watch the application movie on our website for the right technique) Spread the coating properly by going over the same surface only 3 times. Wait about 15 seconds until a haze forms. Remove the haze by buffing lightly with a microfiber towel. Wait 2 hours before you continue with the application of the SI07 or SI12. After 2 hours, SIBC is 80% cured and ready to receive SI07 or SI12. After 11 days, it is fully hardened and semi-permanent.
Our coatings are very easy to apply.

Our coatings have super-hydrophobic properties, so even graffiti becomes easy to remove using a pressure washer. Shine and protect aluminum, stainless steel, and paint with an invisible layer that makes the surface scratch-resistant and anti-fingerprint while preserving the original finish.

APPLICATION OF SIO7 OR SI14

Shake the bottle very well before use! We recommend applying the treatment in easy-to-handle segments of about 50 x 50 cm.

Put 3-4 drops of SIO7 or SI14 on the mini towel (#40100502, 15 x 6 inch) using the applicator block (#40100602) underneath.

For hard-to-reach areas, our cotton pad (#40100100) can be used. Start in the middle of the surface and work outward, spreading it with light pressure in criss-cross motions until the product is evenly distributed. (To make sure you use the right technique, watch the application video at www.nano-ceramic.com)

MOST IMPORTANT: Continue until no product residue is visible. If you use too much coating or start in the corner of a panel, then you will not be able to divide it properly which can prevent the formation of even layers.

When applied correctly, there is no need to use a microfiber towel for further polishing. If you still prefer to buff it, then rub very gently and make sure that you use clean towels.
SIO6 is a superb safety feature for trucks and buses. In industry, super-hydrophobic coatings are already widely used in ultra-dry surface applications. In addition to these industrial applications, our super hydrophobic coatings have proven their use on vehicle windshields to prevent rain droplets from clinging to the glass.

How to Use SIO6, our Glass / Acrylic / Vinyl Coating:

These products can be stored for up to 24 months (in a dry, temperature-stable, dark environment)

Consumption:
Approximately 2 ml/m²
Ambient temperature: 5-30°C
Avoid direct sunlight and/or high humidity.

IMPORTANT:
Before you use a NANO-CERAMIC product, please make sure you wear suitable protection gear. We always recommend to use latex or nitrile gloves to make sure your hands are protected.

Shake the bottle very well before use!

Take a soft cotton pad (#40100100) and pour a few drops of the coating on it (start with a small amount, as very little product is needed).

Rub evenly onto glass or acrylic panels or vinyl surfaces with firm pressure on the pad. (to make sure you use the right technique watch the apply video on www.nano-ceramic.com)

When applied correctly, you can see a light grey haze on the surface.

Gently use a clean cheesecloth to polish away the haze after all solvents are vaporized.

CURING TIME
Immediately after polishing, the coating is dry and resistant to touching. At normal ambient temperature, the coatings are completely cured after approximately 12 hours.
How to Use SI11/SI12, Our 2-Component, Super-Durable, Transparent Coatings:

These products can be stored for up to 24 months (in a dry, temperature-stable, dark environment)

Consumption:
Approximately 50-70 gr/m²
Ambient temperature: 5-30°C
Avoid direct sunlight and/or high humidity.

IMPORTANT:
Before you use a NANO-CERAMIC product, please make sure you wear suitable protection gear. We always recommend to use latex or nitrile gloves to make sure your hands are protected.

Application information
The SI11 system can be applied directly or indirectly on all hard surfaces (porous and non-porous) such as aluminum, steel, wood, acrylic, and paint. The SI11 system is transparent gloss, while SI12 is a matte finish. Treatment will give surfaces a hydrophobic, self-cleaning barrier that will make cleaning easier and less costly, as special cleaners are unnecessary. The original surface will be protected against corrosion, carbon dioxide permeability, UV radiation, and scratches. The effects of time and exposure to the elements will be significantly lessened.

Preparation
First, clean the surfaces thoroughly until absolutely clean. If necessary, use our Reactivating Pure Shine Shampoo in combination with a high-pressure washer. Make sure that all contamination is removed so that the coating can bond properly onto a clean surface. The surface must be completely dry before application and must stay dry for 24 hours after application!

This a 2-Component Nano Coating System
Mix one bottle of SI11B-SI12B (250 gr) with one bottle of SI11A-SI12A-SI13A (750 gr) by pouring bottle B into bottle A, or measure exactly by net weight in a ratio of 3:1 and mix very well. Carefully pour the mixed contents into a professional paint sprayer, and spray in thin layers until the surface reaches a thickness of 80 or 200 μm / 0.1 mm or 0.2 mm after drying, depending on your choice of protection for 10 or 20 years. Depending on the surface, material and structure, different application techniques can be used (such as paint rollers or brushes). Let the surface dry for 24 hours. After 24 hours, 85% is cured, and the remaining 15% will be fully cured after 7 days. Be aware that the mixed contents cannot be stored longer than 3 hours. The surface can simply be maintained with a high-pressure washer at 80-120 bar using our biodegradable reactivating shampoo.

Tool cleaning
The individual components, as well as the mixing system of the paint sprayer, can be diluted and cleaned using our Steril Cleaner.
SIFX gives interiors a flexible, invisible layer that bonds to canvas, fabric and leather surfaces. Its super-hydrophobic property repels water and helps to keep dirt from penetrating into the surfaces.

How to use SIFX, our Canvas, Fabric and Leather “Dirt Barrier”:

These products can be stored for up to 24 months (in a dry, temperature-stable, dark environment)

**Consumption:**
- Canvas +/- 40 ml/m²
- Fabric +/- 40 ml/m²
- Leather +/- 20 ml/m²

**Ambient temperature:** 5-30°C
Avoid direct sunlight

**Notice**
If the textile surface is coarse, then the spaces between the threads will be too large to make it watertight. However, the coating will effectively protect the individual fibers from the penetration of water

**CLEANING**
Clean the surface thoroughly until it is absolutely clean. If necessary, use our SHRE Reactivating Pure Shine Shampoo. Make sure that all contamination is removed so that the sealant can bind properly onto a clean surface. Make sure that the surface is completely dry before application!

**APPLICATION**
Shake the bottle very well before use! Spray until the surface is saturated.

**CURING TIME**
At normal ambient temperature, the coatings are completely cured after approximately 24 hours.

**AFTERCARE**
We strongly recommend using our reactivating shampoo to reactivate the nano layer and clean at the same time, without leaving a film of polymers or coloring chemicals behind.

**IMPORTANT:**
Before you use a NANO-CERAMIC product, please make sure you wear suitable protection gear. We always recommend using latex or nitrile gloves to make sure your hands are protected.
Cleans the smallest pores to remove stubborn dirt and odors.

MPCL Multi-Purpose Interior Cleaner

Product ID: MPCL0500 500 ml / MPCL5000 5 L
Consumption: +/- 2.5 ml/m²
Used for: All surfaces
Application field: Interior use

MPCL Multi-Purpose Cleaner cleans and protects all interior surfaces quickly and easily.

Just spray and wipe to clean and protect interior plastics, vinyl, leather, fabrics, rubber, metal, carbon fiber, wood, audio and video equipment, and even engine compartments.

MPCL Multi-Purpose Cleaner leaves a strong UV protectant to keep surfaces looking like new!

Using an advanced concentrated formula, it cleans the smallest pores to remove stubborn dirt and odors.

- Anti-bacterial
- Pleasant scent
- Anti-odor

Easy to apply: Spray, Wipe, Buff Off

Anti-bacterial

Anti-odor

Applicator:

40100703
Scrub cleaner is the safe way to remove stubborn contamination while keeping the ceramic layer intact.

**SCRUB**

Scrub Cleaner
Non-Scratching

- **Product ID**: SCRUB1000 1 L / SCRUB5000 5 L
- **Consumption**: +/- 2.5 ml/m²
- **Used for**: Hard surfaces
- **Application field**: Paint, glass, chrome, plastic, carbon fiber

SCRUB pretreatment cleaner is the gentle way to clean trucks and buses protected with a layer of NANO-CERAMIC coating that need maintenance due to water spots.

Scrub Cleaner uses ultra-fine polishing agents that safely and effectively remove mineral deposits or other stubborn contaminants. Suitable for use on paint, glass, chrome, and many other materials without scratching the surface.

If the ceramic coating is still stained after using our WSRE Water Spot & Stain Remover, applying SCRUB with a microfiber towel is recommended.

**Applicator:**

40100703
Steril pretreatment cleaner is a 100% sterile mixture that uses new technology to thoroughly prepare hard surfaces to form an enhanced and super-durable bond with our ceramic coatings.

- Makes surfaces much easier and quicker to clean and infiltrates the tiniest pores to create maximal grip for high-tech coating and sealing applications
- Degreases and prepares in a single step
- Safe and economical to use
- Won’t discolor materials
Si-Nano Protect
Ceramic Sealer

Product ID: SIPR0250  250 ml / SIPR1000  1 L / SIPR5000  5 L
Thickness: 0.5 Micron
Consumption: +/- 2.5 ml/m²
Used for: High gloss & water spot prevention
Application field: Paint, plastic, chrome, carbon fiber

Si-Nano Protect forms a semi-permanent molecular bond with painted and nano-coated surfaces, and is designed to prevent water spots, acting as a glossy protective layer that will last for multiple months with just one application.

- Makes surfaces much easier and quicker to clean while reducing the adhesion of dirt and dust.
- Leaves a high-gloss surface behind that features an outstanding hydrophobic effect, staying cleaner longer.
- Cleaning intervals and the formation of water spots will be greatly reduced.
- Can also be used on unlacquered plastic and chrome parts, making the product perfect for all automotive, motorcycle, and scooter applications.
- Works great in engine compartments and to renew dashboard gloss.
- Lasts up to 3 months

How to use:
• See page 21
HOW TO USE:

NANO-CERAMIC Si-Nano Protect, Steril & Shampoo

CLEANING
Clean all surfaces thoroughly with SHRE Shampoo, and use our Steril Pretreatment Cleaner as a last step to make sure that all residue and contamination is removed so the Si-Nano Protect can bind properly with the surface. Make sure that the surface is completely dry before application!

APPLICATION
Shake the bottle very well before use! Spray 2-3 times on a clean microfiber towel (start with small amounts; only a little product is necessary). Moisten all panels evenly. When applied correctly, you will see a light grey haze on the surface. Polish away the haze using a clean microfiber cloth. Using too much product can cause streaking.

CURING PERIOD
Immediately after polishing away the haze, the surface can be touched. At normal ambient temperature, the sealant is completely cured after approximately 10 minutes.

AFTERCARE
We strongly recommend using our SHRE Pure Shine Shampoo to reactivate the layer and clean at the same time, without leaving a film that could eliminate the hydrophobic effect that the Si-Nano Protect layer provides. Our reactivating shampoo is environmentally friendly.
Si-Nano Vision is an extremely high-tech ceramic sealer that is specially designed for coated and non-coated glass surfaces.

- Makes glass much easier and quicker to clean while drastically reducing the adhesion of dirt.
- Has an outstanding hydrophobic effect, so glass stays cleaner longer.
- Reduces cleaning intervals and prevents the formation of water spots.
- Repels water for 30% better visibility in rainy conditions.
- Lasts up to 3 months
HOW TO USE:

NANO-CERAMIC Si-Nano Vision, Steril & Shampoo

These products can be stored for up to 24 months (in a dry, temperature-stable, dark environment)

Consumption:
+/- 2.5 ml/m²
or 1-2 trigger sprays per window.

Ambient temperature: 5-30°C
- Avoid direct sunlight and/or high humidity.

IMPORTANT:
Before you use a NANO-CERAMIC product, please make sure you wear suitable protection gear. We always recommend to use latex or nitrile gloves to make sure your hands are protected from any possible damage to your skin.

CLEANING
Clean all surfaces thoroughly with SHRE Shampoo, and use our Steril Pretreatment Cleaner as a last step to make sure that all residue and contamination is removed so the Si-Nano Protect can bind properly with the surface. Make sure that the surface is completely dry before application!

APPLICATION
Shake the bottle very well before use! Spray 2-3 times on a clean microfiber towel (start with small amounts; only a little product is necessary). Moisten all panels evenly. When applied correctly, you will see a light grey haze on the surface. Polish away the haze using a clean microfiber cloth. Using too much product can cause streaking.

CURING PERIOD
Immediately after polishing away the haze, the surface can be touched. At normal ambient temperature, the sealant is completely cured after approximately 10 minutes.

AFTERCARE
We strongly recommend using our SHRE Pure Shine Shampoo to reactivate the layer and clean at the same time, without leaving a film that could eliminate the hydrophobic effect that the Si-Nano Protect layer provides. Our reactivating shampoo is environmentally friendly.

WINDSHIELD ADDITIVE
SIVI can also be used as a windshield washer fluid additive when diluted 2:100.

Si-Nano Vision can also be used as a windshield washer fluid additive when diluted 2:100.

Applicator:

40100703
WSRE water spot and stain remover safely dissolves calcium and magnesium.

WSRE

Water Spot / Stain Remover
Biodegradable & Gentle on Skin

Product ID: WSRE5000 5 L / WSRE020L 20 L
Consumption: +/- 10 ml/m²
Used for: Hard surfaces
Application field: Paint, glass, chrome, plastic, carbon fiber

This fully biodegradable stain remover is made with a synergistic blend of environmentally friendly acids to boost cleaning performance and cost-savings. WSRE is suitable for use on glass, steel, porcelain, and many other materials.

- Anti-corrosive and safe to use on all hard surfaces.
- Prevents mineral deposition and dissolves lime scale.
- GHS label: NO health hazard label or acute toxicity
- Biodegradable and safe for all surfaces
- Reduces spotting & filming
- Stays cleaner longer

Application: Wet the surface and wait 15 minutes so the calcium and magnesium can dissolve. For stubborn buildup, pretreat with our SCRUB cleaner.
Nano Wash adds a glossy, super-hydrophobic layer while washing your car and cuts drying time by 80%.

- Can be used for hand-washing or in automatic washes and is suitable for coated and non-coated trucks.
- Premium grade, high-gloss shampoo, low-foaming to reduce drying stains.
- Features a built-in hydrophobic effect, so glass and paint stays cleaner longer.
- Cleaning intervals and the formation of water spots will be greatly reduced.
- Dries 80% faster, saving time and money.
- Super-hydrophobic surface angle >150°
- Dilute 1:50.
- Hydrophobic effect lasts up to 4 weeks.
Conventional car wash products contain polymers and chemical dyes that can eliminate the hydrophobic effect.

SHR
Multi-Purpose Pure Shine Shampoo

Product ID: SHRE5000 5 L / SHRE020L 20 L
Consumption: +/- 20 ml 10 L water (0.05 ml/m²)
Used for: Automatic or manual washing, interior & exterior
Application field: Coated and uncoated trucks

SHRE reactivating shampoo is a high-tech shampoo that is specially designed for today's high-performance vehicle washes.

This shampoo is free from polymers, waxes, and coloring chemicals that can severely degrade the hydrophobic effect that a nano layer provides

- Pure gloss
- Reactivates nano layers
- Safe to use for interior cleaning
- Dilute 1:500

Easy to apply
Hydrophobic: Water & oil repellent
Anti-water spot
Easy to clean
Stays cleaner longer

Applicator: 40100703
