Marine
What is NANO-CERAMIC?

NANO-CERAMIC is a revolutionary, ultra-hard and long-lasting ceramic surface coating that provides superior scratch resistance and semi-permanent protection for all yacht and marine materials like fiberglass, stainless steel, glass, and carbon fiber by forming semi-permanent molecular bonds with the surface.

NANO-CERAMIC is flexible enough to handle the expansion and deformation of fiberglass hulls. It won’t crack or peel off.

NANO-CERAMIC gives a near-permanent super gloss and will leave surfaces in showroom condition without the need for waxes or other cleaning agents.

NANO-CERAMIC is completely resistant to acidic environmental substances, such as bird droppings and acid rain, and to oxidation and corrosion from salty water, unlike your factory marine paint and other parts which can be permanently damaged.

NANO-CERAMIC will not etch or dissolve when in contact with harmful substances like salts, fuels, and hydraulic fluids, maintaining the clean and original surface.
What are the benefits of applying NANO-CERAMIC?

NANO-CERAMIC will provide marine crafts with a superior clear coat film that can withstand harsh environmental weathering and exposure to the elements. It is resistant to chemical etching, is much harder than factory marine coatings, will reduce swirl marks and scratches, and has a semi-permanent hydrophobic surface that is much easier to clean, and stays cleaner longer.

How it works:

**Step 1** Surface layer of factory clear coat is damaged and contaminated

**Step 2** Technician decontaminates and polishes clear coat to produce a smooth and even surface.

**Step 3** Coating thickness will be restored with a superior NANO-CERAMIC layer.

*Tip! Apply immediately upon delivery of vessel for best results.*
NANO-CERAMIC is available in different grades:

**SIBC Basecoat**
- For maximum results with total hardness, first use our Gorilla Basecoat 2.5 Micron. Especially recommended for soft clear coats & repainted vessels, SIBC basecoat provides ultimate hardness with an almost unremovable smooth finish ready to bond with any of our revolutionary protective coatings.
- Superb Hydrophobic Effect
- Excellent Weather Resistance

**SIO5 Diamond**
- 2 Micron HD (High Density)
- Reduce micro-scratches with H9++ Hardness
- Superb Hydrophobic Effect
- Excellent Weather Resistance
- UV & Thermal Resistance
- Diamond-hard stand-alone on matte paint
- 5 Years of protection on factory finish (in combination with SIBC)

**SIO7 Ultra Gloss**
- 6 Micron
- Reduce Scratches with H9+ Hardness
- Superb Hydrophobic Effect
- Excellent Weather Resistance
- UV & Thermal Resistance
- Enhanced Durability
- 3 Years protection on factory finish (in combination with SIBC)

**SIO6 Clear View**
- Protects glass surfaces & mirrors
- Repels water for 30% better visibility in rainy conditions.
- 2H Hardness (2 Micron)
- Lasts 6-12 months

**THE NEW GENERATION COATINGS**

NANO-CERAMIC.COM
**SIFX**
Fabric & Leather

- Water and dirt are repelled, so spills are easier to clean
- Enhanced hygiene
- Superb hydrophobic effect to keep fabrics, leather, and carpets cleaner longer
- Resists environmental pollutants
- Lasts 1-3 years (depending on use)

---

**NWAS**
Nano Wash

- Premium grade, high-gloss shampoo, low-foaming to reduce drying stains.
- Features a built-in hydrophobic effect, so glass and paint stay cleaner longer.
- Cleaning intervals and the formation of water spots will be greatly reduced.
- Dries 80% faster, saving time and money.
- Super-hydrophobic surface angle >150°
- Dilute 1:50. Lasts up to 4 weeks.

---

**SIPR**
Si-Nano Protect

- 0.5 Micron
- Use on Paint, Chrome, Plastic, Dashboard & Engine
- Easy to Apply: Spray, Wipe, Buff Off
- Apply to Coated/Uncoated Vessels
- Hydrophobic Effect
- Brings back original shine
- Anti-water spot protective layer
- Lasts up to 3 Months with one application

---

**SIVI**
Si-Nano Vision

- 0.5 Micron
- Use on Windshields and Mirrors
- Can be used as a wiper fluid additive diluted in the ratio of 2:100
- Easy to Apply: Spray, Wipe, Buff Off
- Apply to Coated/Uncoated Vessels
- Hydrophobic Effect
- 30% Better visibility in rainy conditions
- Anti-water spot protective layer
- Lasts up to 3 Months with one application
The Perfect Protection Plan for Your Marine Craft

**OPTIONAL**
- SI06
  - Glass / Acrylic
  - Windows

**RECOMMENDED**
- SI10
  - Basecoat
  - Semi-Permanent Protection

**OPTIONAL**
- SIFX
  - Interior Sealer
  - Fabrics & Leather

**SI14**
- Diamond
  - 5-Year protection
  - Topcoat
    - Hydrophobic
    - Micro-Scratch Resistant

- A stand alone product that can also be used on matte paint due to its 2 Micron thickness.

**SI07**
- Ultra Gloss
  - 3-Year protection
  - Topcoat
    - Hydrophobic
    - Scratch Resistant

**Weekly**
- SHRE
  - Pure Shine Shampoo
- MPCL
  - Multi-Purpose Cleaner

**Monthly**
- NWAS
  - Hydrophobic Nano-Wash

Maintenance
- **3-MONTH CYCLE**
  - Extra protective layer to avoid water spots that can damage the ceramic layer, and to maintain a hydrophobic barrier

   - Curing time: 2 hours after application

5. **Step 5**
   - Nano Layer Hydrophobic Topcoat

6. **Step 6**
   - Curing time: 6 hours in ambient temperature
How to use our coatings (SIO6, SIO7, SI10, SI14) on paint, fiberglass, stainless steel, chrome and varnished wood:

These products can be stored for up to 24 months (in a dry, temperature-stable, dark environment)

Consumption:
Approximately 0.06 oz/ft²
Ambient temperature: 41-86°F
Avoid direct sunlight and/or high humidity.

IMPORTANT:
Before you use a NANO-CERAMIC product, please make sure you wear suitable protection gear. We always recommend to use latex or nitrile gloves to make sure your hands are protected.

RECOMMENDATION
The best effect can be achieved by treating surfaces that are in new or almost new condition.

CLEANING
Clean the surface thoroughly until it is absolutely clean. If necessary, use our Shampoo and Scrub Cleaner with our Steril Pretreatment Cleaner as a last step to make sure that all Scrub Cleaner residue or other contamination is removed, and the coating can bind properly. Make sure that the surface is completely dry before application!

APPLICATION SI10 BASECOAT PERMANENT
Shake bottle before use! We recommend applying the treatment in easy-to-handle segments of about 20 x 30 inch. Put 5-6 drops/6ft² of SI10 on the mini towel (#40100502, 6 x 6 inch) using an applicator block (#40100602) underneath (Watch the application movie on our website for the right technique). Spread the coating properly by going over the same surface only 3 times. Wait about 15 seconds until a haze forms. Remove the haze by buffing lightly with a microfiber towel. Wait 2 hours before you continue with the application of the SIO7 or SI12. After 2 hours, SIBC is 80% cured and ready to receive SIO7 or SI12. After 11 days, it is fully hardened and semi-permanent.
SI07/SI14 Protects aluminum and stainless steel with an invisible layer that makes the surfaces anti-fingerprint and easy to clean.

**APPLICATION OF SI07 OR SI14**

Shake the bottle very well before use! We recommend applying the treatment in easy-to-handle segments of about 50 x 50 cm.

Put 3-4 drops/m² of SI07 or SI14 on the mini towel (#40100502, 15 x 15 cm) using the applicator block (#40100602) underneath.

For hard-to-reach areas, our cotton pad (#40100100) can be used. Start in the middle of the surface and work outward, spreading it with light pressure in criss-cross motions until the product is evenly distributed.

**MOST IMPORTANT:**

Continue until no product residue or hazing is visible. If you use too much coating or start in the corner of a panel, then you will not be able to divide it properly which can prevent the formation of even layers.

When applied correctly, there is no need to use a microfiber towel for further polishing. If you still prefer to buff it, then rub very gently and make sure that you use clean towels.
Shake the bottle very well before use!

Take a soft cotton pad (#40100100) and pour a few drops of the coating on it (start with a small amount, as very little product is needed).

Rub evenly onto glass or acrylic panels or vinyl surfaces with firm pressure on the pad.

When applied correctly, you can now see a light grey haze on the surface. Gently use a clean cheesecloth to polish away the haze after all solvents are vaporized.

CURING TIME

Immediately after polishing, the coating is dry and resistant to touching. At normal ambient temperature, the coatings are completely cured after approximately 12 hours.

SIO6 is a superb treatment for marine craft windows. In other industries, super-hydrophobic coatings are already widely used in ultra-dry surface applications. In addition to industrial applications, our super-hydrophobic coatings have proven their use on vessels and other vehicle windshields to prevent rain droplets from clinging to the glass. Our coating is anti-corrosive, anti-icing, has self-cleaning capabilities, and is safe to use on all glass and acrylic surfaces.

How to use SIO6, our glass/ acrylic/ vinyl coating:

These products can be stored for up to 24 months (in a dry, temperature-stable, dark environment)

Consumption:
Approximately 0.06 oz/ft²
Ambient temperature: 41-86°F
Avoid direct sunlight and/or high humidity.

IMPORTANT:
Before you use a NANO-CERAMIC product, please make sure you wear suitable protection gear. We always recommend to use latex or nitrile gloves to make sure your hands are protected.
How to Use SI11/SI12, our 2-Component, Super-Durable, Transparent Coatings:

These products can be stored for up to 24 months (in a dry, temperature-stable, dark environment).

Consumption:
Approximately 0.015 lbs/ft²
Ambient temperature: 41-86°F
Avoid direct sunlight and/or high humidity.

IMPORTANT:
Before you use a NANO-CERAMIC product, please make sure you wear suitable protection gear. We always recommend to use latex or nitrile gloves to make sure your hands are protected.

Applicators:

Application information
The SI11/SI12 system can be applied directly or indirectly on all surfaces (porous and non-porous) such as concrete, steel, wood, acrylic, gypsum, painted or unpainted surfaces, indoors, or outdoors. The surface underneath will be superbly protected against erosion and corrosion and will stay cleaner longer. Cleaning becomes quicker, easier, and less expensive, as special cleaning agents are unnecessary.

Preparation
Clean the surface thoroughly until it is absolutely clean. If necessary, use our Reactivating Pure Shine Shampoo in combination with a high-pressure washer. Make sure that all contamination is removed so that the coating can bond properly onto a clean surface. The surface must be completely dry before application and must stay dry for 24 hours after application!

This is a 2-Component Nano Coating System
Mix one bottle of SI11B-SI12B (55 lbs) with one bottle of SI11A-SI12A-SI13A (1.65 lbs) by pouring bottle B into bottle A, or measure exactly by net weight in a ratio of 3:1 and mix very well. Carefully pour the mixed contents into a professional paint sprayer, and spray in thin layers until the surface reaches a thickness of 80 or 200 μm / 0.004” or 0.08” inch after drying, depending on your choice of protection for 10 or 20 years. Depending on the surface, material and structure, different application techniques can be used (such as paint rollers or brushes). Let the surface dry for 24 hours. After 24 hours, 85% is cured, and the remaining 15% will be fully cured after 7 days. Be aware that the mixed contents cannot be stored longer than 3 hours. The surface can simply be maintained with a high-pressure washer at 80-120 bar using our biodegradable reactivating shampoo.

Tool cleaning
The individual components, as well as the mixing system of the paint sprayer, can be diluted and cleaned using our Steril Cleaner.
CLEANING
Clean the surface thoroughly until it is absolutely clean. If necessary, use our Reactivating Pure Shine Shampoo. Make sure that all contamination is removed so that the sealant can bind properly onto a clean surface. Make sure that the surface is completely dry before application!

APPLICATION
Shake the bottle very well before use! Spray until the surface is saturated.

CURING TIME
At normal ambient temperature, the coatings are completely cured after approximately 24 hours.

AFTERCARE
We strongly recommend using our reactivating shampoo to reactivate the nano layer and clean at the same time, without leaving a film of polymers or coloring chemicals behind.

IMPORTANT:
Before you use a NANO-CERAMIC product, please make sure you wear suitable protection gear. We always recommend using latex or nitrile gloves to make sure your hands are protected.
How to use SIPR Si-Nano Protect and SIVI Si-Nano Vision:

These products can be stored for up to 24 months (in a dry, temperature-stable, dark environment).

**Consumption:**
Consumption: 0.007 oz/ft² or 2 trigger sprays per 10 ft²

Ambient temperature: 41-86°F
- Avoid direct sunlight and/or high humidity.

**IMPORTANT:**
Before you use a NANO-CERAMIC product, please make sure you wear suitable protection gear. We always recommend to use latex or nitrile gloves to make sure your hands are protected.

**CLEANING**
Clean all surfaces thoroughly with SHRE Shampoo, and use our Steril Pretreatment Cleaner as a last step to make sure that all residue and contamination is removed so the Si-Nano Protect can bind properly with the surface. Make sure that the surface is completely dry before application!

**APPLICATION**
Shake the bottle very well before use! Spray 2-3 times on a clean microfiber towel (start with small amounts; only a little product is necessary). Moisten all panels evenly. When applied correctly, you will see a light grey haze on the surface. Polish away the haze using a clean microfiber cloth. Using too much product can cause streaking.

**CURING PERIOD**
Immediately after polishing away the haze, the surface can be touched. At normal ambient temperature, the sealant is completely cured after approximately 10 minutes.

**AFTERCARE**
We strongly recommend using our SHRE Pure Shine Shampoo to reactivate the layer and clean at the same time, without leaving a film that could eliminate the hydrophobic effect that the Si-Nano Protect/Vision layer provides. Our reactivating shampoo is environmentally friendly.

**WINDSHIELD ADDITIVE**
SIVI can also be used as a windshield washing fluid additive when diluted 2:100.
Si-Multi Maintenance Cleaner Hydrophobic Disinfectant

Product ID: SIMC0250 8.5 oz / SIMC1000 32 oz / SIMC5000 5gal
Consumption: 0.007 oz/ft² or 2 trigger sprays per 10 ft²
Used for: Glass / chrome / porcelain / vinyl / acrylic
Application field: Marine vessels and watercraft

Si-Multi Maintenance Cleaner renews molecular bonds and creates a hydrophobic nano layer while cleaning and disinfecting. High-tech cleaning agents make maintenance quick and easy. Anti-bacterial properties make surfaces more hygienic, and the effect lasts as long as the layer. This cleaner has an outstanding hydrophobic effect with reduced adhesion of dirt, so the surface stays cleaner longer.

Can be used as a maintenance cleaner on all nano and non-nano coated surfaces.

Will last for approximately 1 month.
Scrub cleaner is the safe way to remove stubborn contamination while keeping the ceramic layer intact.

SCRUB

Scrub Cleaner
Non-Scratching

Product ID: SCRUB0250 8.5 oz / SCRUB1000 32 oz
Consumption: +/- 0.08 oz/10 ft²
Used for: Hard surfaces
Application field: Paint, glass, chrome, plastic, carbon fiber

SCRUB pretreatment cleaner is the gentle way to clean vessels protected with a layer of NANO-CERAMIC coating that need maintenance due to water spots.

Scrub Cleaner uses ultra-fine polishing agents that safely and effectively remove mineral deposits or other stubborn contaminants. Suitable for use on paint, glass, chrome, and many other materials without scratching the surface.

If the ceramic coating is still stained after using our WSRE Water Spot & Stain Remover, applying SCRUB with a microfiber towel is recommended.

Applicator:

40100703
Steril pretreatment cleaner is a 100% sterile mixture that uses new technology to thoroughly prepare hard surfaces to form an enhanced and super-durable bond with our ceramic coatings.

- Makes surfaces much easier and quicker to clean and infiltrates the tiniest pores to create maximal grip for high-tech coating and sealing applications
- Degreases and prepares in a single step
- Safe and economical to use
- Won't discolor materials

**Easy to apply**

**Degreaser**

**Easy to clean**

**Sterile clean**

**Safe to use**

Applicator:

40100703
Dries 80% faster with less water spotting, leaving a glossy shine behind.

**NWAS**

**Hydrophobic Gloss Shine - Nano Wash**

- **Product ID**: NWAS1000 32 oz / NWAS5000 1.32 gal
- **Consumption**: +/- 0.013 oz
- **Used for**: Water spot protection
- **Application field**: For manual or automatic systems

Nano Wash adds a glossy, super-hydrophobic layer while washing your vessel and cuts drying time by 80%.

- Can be used for hand-washing or in automatic car washes and is suitable for coated and uncoated vessels.
- Premium grade, high-loss shampoo, low-foaming to reduce drying stains.
- Features a built-in hydrophobic effect, so glass and paint stays cleaner longer.
- Cleaning intervals and the formation of water spots will be greatly reduced.
- Dries 80% faster, saving time and money.
- Super-hydrophobic surface angle >150°
- Dilute 1:50. Hydrophobic effect lasts up to 4 weeks.

---

**Easy to apply by just washing**

**Super hydrophobic >150°**

**Anti-water spot**

**Easy to clean**

**Stays cleaner for longer**

**Applicator:**

40100703
Scrub cleaner is the safe way to remove stubborn contamination while keeping the ceramic layer intact.

**SHRE**

Multi-Purpose Pure Shine Shampoo

- **Product ID**: SHRE1000 32 oz / SHRE5000 1.32 gal / SHRE020L 5 gal
- **Consumption**: +/-0.7 oz : 3 gal
- **Used for**: Automatic or manual washing, interior & exterior
- **Application field**: Coated and uncoated vessels

SHRE reactivating shampoo is a high-tech shampoo that is specially designed for today’s high-performance marine washes.

This shampoo is free from polymers, waxes, and coloring chemicals that can severely degrade the hydrophobic effect that a nano layer provides

- Pure gloss
- Reactivates nano layers
- Safe to use for exterior and interior cleaning
- Dilute 1:500

MPCL Multi-Purpose Interior Cleaner

Product ID: MPCL0500 16 oz / MPCL5000 1.32 gal
Consumption: +/- 0.0085 oz/ft²
Used for: All surfaces
Application field: Interior use

MPCL Multi-Purpose Cleaner cleans and protects all interior surfaces quickly and easily.

Just spray and wipe to clean and protect interior plastics, vinyl, leather, fabrics, rubber, metal, carbon fiber, wood, audio and video equipment, and even engine compartments.

MPCL Multi-Purpose Cleaner leaves a strong UV protectant to keep surfaces looking like new!

Using an advanced concentrated formula, it cleans the smallest pores to remove stubborn dirt and odors.
